(b) \& | M1 for $(x \pm 4)^{2}$ or an equation for $a$ (allow sign error $\pm 4$ or $\pm 8$ on ALT) 1stA1 for $(x-4)^{2}-16(-29)$ can ignore -29 or for stating $a=-4$ and an equation for $b$ $2^{\text {nd }} \mathrm{A} 1$ for $b=-45$ |
| :--- |
| Note M1A0 A1 is possible for $(x+4)^{2}-45$ |
| N.B. On EPEN these marks are called B1M1A1 but apply them as M1A1A1 |
| M1 for a full method leading to $x-4=\ldots$ or $x=\ldots$ (condone $x-4=\sqrt{-n}$ ) |
| N.B. $(x-4)^{2}-45=0$ leading to $(x-4) \pm \sqrt{45}=0$ is M0A0A0 |
| A1 for $c$ and A1 for $d$ |
| N.B. M1 and A1 for $c$ do not need $\pm$ (so this is a special case for the formula method) but $\pm$ must be present for the $d$ mark) |
| Note Use of formula that ends with $\frac{8 \pm 6 \sqrt{5}}{2}$ scores M1 A1 A0 (but must be $\sqrt{5}$ ) i.e. only penalise non-integers by one mark. | \& <br>
